

## HASHER WASHER

Suitable for cutting and washing Soft  
Offal, Gut, Paunches and Bibles

The Standard (Shredder Type) hasher consists of a split cast iron body, machined to take two high tensile steel shafts. Each shaft carries a quantity of circular saw blades, 400mm dia., the high speed shaft (430 r.p.m.) rotates in the opposite direction to the slow speed shaft (90 r.p.m.), creating a cutting action. Both shafts are mounted on sealed plumber block bearings and are driven by a TEFC electric motor. The drive is transmitted through multiple vee belts to a flywheel fitted on the high speed shaft, and machine cut spur gears transmit the drive to the slow shaft.

### FEATURES

- Overall Dimensions(mm):  
1220 Wide x 1350 Long x 2100 High
- Welded RHS Frame Construction – Hot Dip Galvanized
- Split Cast Iron Body – c/w Epoxy Iron Oxide Coating
- 30 kW TEFC Electric Motor
- Guards and Chute – Stainless Steel
- Water Spray Pipe – c/w Valve and Manifold.
